

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

2. He ascribes much virtue to a sort of earthy fat contain'd in the Water. (At this I much wonder, for he seems only to describe a Clay or sort of Fullers Earth, that holds very little Medical Virtue.)

He supposes also a Sulphur and Nitre to be conceal'd in the Water, (but it does not appear in his *Examen Chymicum*) by which Ulcers are heal'd, Coagulations are dissolved, relax'd Nerves are strengthened, Scabs and Leprous Affections cured, &c.

The following Chapters give a more particular account of the several Distempers for which these Bathings are used ; as also Cautions in what Cases to forbear the use of Bathing.

The warmth of these Waters seems not to exceed the tepid Heat of *Bristol* Well.

It seems strange that they have not Courage enough to try the virtue of these Waters internally ; especially since the Contents of these Waters are very few, if any, that are gross or fixt : The Taste is scarce differing from pure Limpid Water ; and what is more strange, in his Experiment with the Solution of Silver, he says, they discover'd no precipitation or perturbation of the Water, whereas we know scarce any Water (except Rain Water) that does not suffer a Change by this Solution, when mixt with it.

L O N D O N : Printed for Sam. Smith and Benj. Walford, Printers to the Royal Society, at the Prince's Arms in St Paul's Church-yard.
